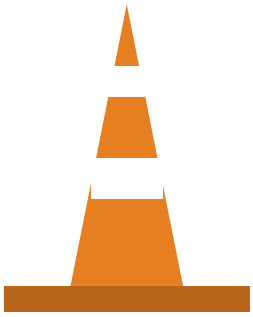
Professional Practice for LiDAR Surveys

BIG IDEA

A great scanner doesn’t make a professional; careful habits do.

- ✓ **right person in charge**
- ✓ **write down the promise**
- ✓ **work safely**
- ✓ **keep the originals**
- ✓ **sign only what you checked**



safety first

THE IDEA

Having a great camera doesn’t make you a professional photographer. A professional also makes sure the right person is in charge, writes down what was promised, works safely, keeps the originals and signs only what they have checked. The same is true for a laser scanner.

REMEMBER

- ✓ Agree on what will be delivered, and how accurate it must be, before you start.
- ✓ Keep the original data. It is the proof of what you measured.
- ✓ Only sign for work you have checked yourself.

TRY THIS

Make a checklist for a job you do at home, like packing for a trip. Check each item off as you go. Did the list catch anything you would have forgotten?
