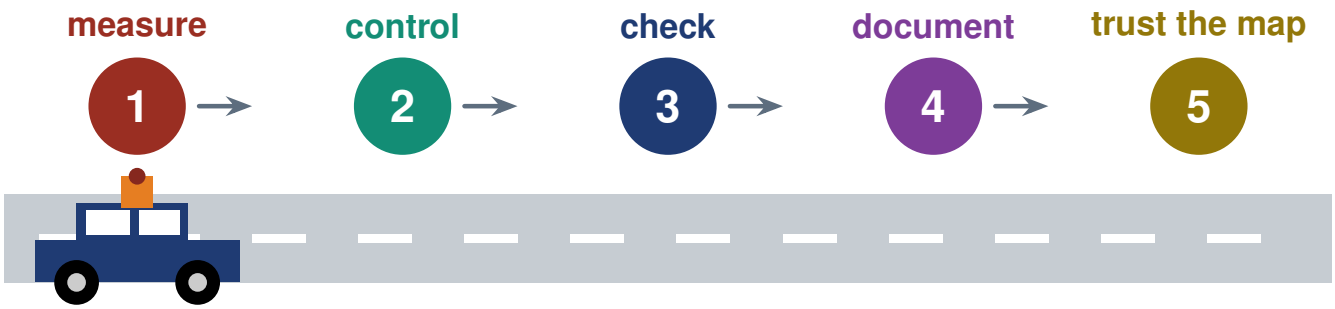
Capstone and Sample Project Dataset

BIG IDEA

Measure carefully, control what you can, check what you must, and write down what you did.



one road, every skill from the course

THE IDEA

This is the “big game” at the end of the season. You use every skill you practiced: measuring with light, turning angles into dots, keeping track of the car, fixing mistakes with landmarks, and checking your work with secret checkpoints. If every step is done carefully, the final map can be trusted to build a real road.

REMEMBER

- ✓ Read the trajectory first. It shows where the map is strong and where it is weak.
- ✓ Put extra checkpoints where the map is weakest, like under a bridge.
- ✓ Write down what you did, so someone else could check it.

TRY THIS

Plan a pretend survey of your yard or school playground. Where would you put control points? Where would you put secret checkpoints to test your map?
